

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

“ Body. Then with a green Stick, which he had in
 “ his Hand, about a Foot an half long, the Bark be-
 “ ing newly peel’d off, urged and provoked the Head,
 “ ’till it bit the Stick in fury several times. Upon this
 “ the Colonel observed small green Streaks to rise up
 “ along the Stick towards his Hand. He threw the
 “ Stick upon the Ground, and in a quarter of an
 “ Hour, the Stick of its own accord split into feve-
 “ ral Pieces, and fell asunder from end to end. This
 “ Account I had from him again at the Writing
 “ hereof.” [*Beverley’s History of Virginia*, from
pag. 260, to 267.]

Father *Labat* likewise tells us (in his *Nouveau Voyage aux Isles de l’Amerique*, Tom. IV. pag. 96, and 106. Ed. Paris, 1722. in 8°.) that Serpents, when they bite their Prey, retire, to avoid being hurt by them; and when dead, cover them with their Spittle, extend their Feet along their Sides and Tails, if Quadrupeds, and then swallow them.

II. Part of a Letter from Dr. Richardson, F. R. S. to Sir Hans Sloane, Bart. President of the Royal Society, and Colleg. Physic. concerning the *Squilla aquæ dulcis*.

I Have met with very little of late in Natural History worth mentioning to you. One Thing I cannot omit, which I do not remember is taken notice of by any Naturalist; that is, the great Destruction that is made amongst the small Fry of Fish by the *Squilla aquæ dulcis*, which abound in most

standing Waters. In a small breeding Pond nigh my House, where I had formerly plenty of small Carp and Tench every Year, and of late scarce any young Breed to be met with, my Gardener not long ago observed one of the *Squilla*, with a Carp in its Mouth almost as large as itself; and has since observed these Insects hunting amongst the Weeds, and vigorously pursuing the small Fry. I order'd the Gardener to catch some of these Insects, and bring them home alive, with some of the smallest Fish he could meet with. We put them together in a large Basen of Water. The Insects were so rapacious, that they fell upon the Fish immediately, and destroy'd several in my Sight; and before Morning had devoured all that were in the Basen.

North-Bierley,
Sept. 5, 1733.

RICHARD RICHARDSON.
